História

History

Edwardian.

A coleção Edwardian deu origem à produção de torneiras na CIFIAL na década de 80 do século XX, marcando uma viragem estratégica da empresa e ficando ligada de forma indelével à história da marca CIFIAL.

The Edwardian collection gave birth to CIFIAL's tap production in the 1980s, marking a strategic turning point for the company and becoming indelibly linked to the history of the CIFIAL brand.

A coleção Edwardian deu origem à produção de torneiras na CIFIAL na década de 80 do século XX, marcando uma viragem estratégica da empresa e ficando ligada de forma indelével à história da marca CIFIAL.

No fim da década de 70, a CIFIAL foi desafiada pelo seu cliente Broadway Collection para produzir uma linha de torneiras. Para além dos manipulos que conhecemos hoje, à época e fruto da elevada capacidade técnica, foram desenvolvidos manipulos de elevado requinte e incomparável detalhe artesanal: "old dominion" e "english rope".

Na década de 80, Nancy Reagan escolhe torneiras da linha Edwardian, produzidas pela CIFIAL, da marca Broadway Collection, para a renovação das casas de banho da Casa Branca.

No início da sua produção, e até surgirem componentes standard para torneiras, a CIFIAL produzia todos os componentes necessários à sua montagem.

Com o decorrer dos anos surge a marca CIFIAL para as torneiras e o modelo Edwardian passa a ser integrado na marca própria. Ao longo do tempo são incorporadas melhorias tecnológicas de forma a cumprir requisitos do mercado nacional e internacional.

Hoje, passados 50 anos desde o seu nascimento, a linha Edwardian é um modelo reconhecido por designers e arquitetos como intemporal e uma referência no mercado, quer pelo design, quer pela qualidade. É até hoje uma peça atual, marcante e relevante no mercado.

Década de desenvolvimento: 1970

The Edwardian collection gave birth to CIFIAL's tap production in the 1980s, marking a strategic turning point for the company and becoming indelibly linked to the history of the CIFIAL brand.

In the late 1970s, CIFIAL was asked by its client Broadway Collection to produce a range of taps. In addition to the handles we know today, at the time, thanks to advanced technical ability, we developed highly refined and incomparably detailed hand-crafted handles: Old Dominion and English Rope.

In the 1980s Nancy Reagan chose taps from CIFIAL's Edwardian range in the Broadway Collection for the renovated White House bathrooms.

At the beginning of production, until the emergence of standard components for taps, CIFIAL produced all the components necessary for their assembly.

Over the years, the CIFIAL brand appeared for taps, and the Edwardian model became part of its own brand. Over time, technological improvements were incorporated to meet the requirements of the national and international markets.

Today, 50 years after its birth, the Edwardian range is recognised by designers and architects as timeless and as a market benchmark due to its design and its quality. To date it has remained an important, striking, modern item on the market.

Decade of development: 1970

TH 465.

A coleção Techno 465, idealizada pelo designer Carlos Aguiar, tornou-se, até à data, no projeto de design industrial português mais premiado. É um marco fundamental da gama de torneiras CIFIAL.

The Techno 465 collection, created by designer Carlos Aguiar, is the most awarded Portuguese industrial design project to date. It is a cornerstone of the CIFIAL tap range.

DESIGN PLUS

Designpreis der
Bundesrepublik
Deutschland
2004

A coleção Techno 465, idealizada pelo designer Carlos Aguiar, tornou-se, até à data, no projeto de design industrial português mais premiado. É um marco fundamental da gama de torneiras CIFIAL.

O processo de desenvolvimento de produto foi desafiante devido ao corpo cilíndrico, de linhas bem definidas. A sua forma foi tão inovadora, em particular nos modelos expostos de duche e banho/duche, que originou a necessidade de registo de patente relativa à arquitetura da torneira e dos dispositivos de apoio em ABS colorido que se alojam sobre a mesma.

Atualmente, seguindo uma vertente mais ecológica, todos os dispositivos de apoio são em madeira.

A coleção Techno 465 foi galardoada com o DESIGN PLUS e RED DOT na Alemanha, e GOOD DESIGN nos EUA.

Ano de lançamento: 1998.

The Techno 465 collection, created by designer Carlos Aguiar, is the most awarded Portuguese industrial design project to date. It is a cornerstone of the CIFIAL tap range.

The product development process was challenging due to the cylindrical body with well-defined lines. Its shape was so innovative, particularly in the shower and bath/shower models displayed, that it led to the need to register a patent for the architecture of the tap and the coloured ABS support devices fitted over it.

Currently, in a more environmentally-friendly approach, all support devices are made of wood.

The Techno 465 collection was awarded the DESIGN PLUS and RED DOT in Germany, and GOOD DESIGN in the USA.

Release year: 1998.

História

History

1904 - Em 1904 nasceu o Centro Industrial de Ferragens, Lda, CIF, propriedade do Sr. Alberto Costa Reis, de apelido “O Biscatão”.

Na época a fábrica produzia fechos, fechaduras, dobradiças, cofres e um número de artefactos metálicos utilizando ferramentas rudimentares.

20's - Desde 4 décadas o CIF sobreviveu a grandes crises e à 1ª Guerra Mundial.

40's - O período que antecedeu a 2ª Guerra Mundial originou graves dificuldades financeiras à empresa. Em processo de falência o CIF viria a ficar nas mãos do “Banco Borges & Irmão”.

Em 1944 José Marques adquire a empresa ao Banco, nascendo a CIFIAL. Os seus alicerces foram os de um filho de um carpinteiro, cujas origens humildes não lhe permitiram frequentar a escola primária. Mas o seu pai transmitiu-lhe a cultura do trabalho, da disciplina e da honradez, que fez dele, entre 1920-1922, trabalhador do Biscatão, exercendo a profissão de “torneiro de peito”.

60's - Com uma grande inteligência e uma perspicácia invulgar, José Marques foi evoluindo a fábrica, modernizando-a. Criou condições para o desenvolvimento preparando o caminho para o futuro: a internacionalização.

Uma nova etapa de modernização estava em marcha.

Deu-se o primeiro passo de automatização da empresa.

1904 - In 1904 the Centro Industrial de Ferragens, Lda, CIF was founded, owned by Alberto Costa Reis, and was nicknamed O Biscatão (The Big Oddjob).

At that time the factory used rudimentary tools to produce latches, locks, hinges, safes and a number of metal objects.

20's - For 4 decades CIF survived major crises and the First World War.

40's - The period running up to the Second World War was a time of serious financial difficulty for the company. Going bankrupt, CIF was taken over by Banco Borges & Irmão.

In 1944, the company was acquired from the bank by José Marques, and Cifial was born. He was the son of a carpenter, whose origins were so humble that he did not even attend primary school. But he inherited his work ethic, discipline and honour from his father, and this led to him working on a lathe at Biscatão from 1920 to 1922.

60's - With great intelligence and uncommon acumen, José Marques developed and modernised the factory, creating the conditions for its progress and preparing the way for the future: internationalisation.

A new stage in the modernisation process was under way.

The first steps in the company's automation were taken.

70's - No seguimento da guerra do Ultramar enfrentaram-se grandes dificuldades. O investimento em equipamento recentemente coincide com o clima de instabilidade política e económica, gerado pela perda das ex-colónias, diminuição acentuada no mercado doméstico e a instabilidade social.

Era obrigatório dar o impulso para mercados mais exigentes.

Os contactos com clientes dos EUA confirmaram as expectativas de então. De forma menos tímida, com mais confiança, a CIFIAL avança para um novo mercado.

CIFIAL

70's - The company faced serious problems in the wake of the Colonial War. Investment in equipment coincided with a climate of political, economic and social instability that was generated by the loss of the former colonies and a sharp decline in the domestic market.

It was crucial to seek out more demanding markets.

Contacts with customers in the US confirmed expectations. Cifial confidently moved into this new market.

80's - Com o desenvolvimento de fechaduras com características inovadoras, assente no elevado nível de qualidade dos produtos CIFIAL, estabeleceu-se uma forte relação com os novos clientes americanos.

Uma conceituada empresa americana solicitou a produção de uma linha de torneiras para a sua marca “Broadway Collection”.

A empresa ganhou confiança, e lançou outros produtos, iniciando definitivamente a conquista do mercado americano, e surge a marca Cifial nas torneiras.

CIFIAL

80's - With the development of locks with innovative features based on Cifial's high quality standards, the company established a strong relationship with its new American customers.

A renowned American company ordered a range of taps for its “Broadway Collection” brand.

Cifial gained confidence and launched other products, and began to win over the American market, with the Cifial brand name finally appearing on taps.

90's - A internalização é consolidada com a abertura das filiais no Reino Unido, EUA e Espanha.

A empresa honra a sua forte tradição de fabricante de ferragens e dá início à produção de fechaduras modernas, traduzida em sistemas de controlo de acessos, surgindo a marca Cifitrónica.

Impulsionada pelo crescimento no mercado americano, surge na CIFIAL uma nova área de negócio - Original Equipment Manufacturer. Este impulso é suportado na instalação completa de uma nova fundição, reforçada com novos robôs de lixar e polir.

É também nesta década que o Grupo assume uma participação na Aquatis e adquire as marcas OLIVA e da LUSEPI, com o objetivo de se tornar líder no setor de soluções integradas para casa de banho.

Antes do final da década, é criada a CIFIAL S.G.P.S., S.A. organizando o Grupo em unidades juridicamente autónomas por área de negócio.

CIFIAL

90's - The company's internalisation was consolidated with the opening of subsidiaries in the UK, USA and Spain.

The company held firm to its strong tradition as a hardware manufacturer and began producing modern locks, translated into access control systems, with the launch of the Cifitrónica brand.

Driven by the growth in the American market, Cifial established a new business area, the Original Equipment Manufacturer. This momentum was supported with the installation of a new foundry, complete with new grinding and polishing robots.

It was also during this decade that the Group bought a stake in Aquatis and acquired the OLIVA and LUSEPI brands, with the aim of becoming a leader in the integrated bathroom solutions sector.

Before the end of the decade, CIFIAL S.G.P.S., S.A. was created, organising the Group into legally independent units by business area.

00's - Esta década levou a cabo uma extensa reestruturação do negócio, acompanhada por uma mudança na imagem corporativa, identificando cada área de atividade - Complete Bath Solutions e Integrated Door Systems.

Dá-se a inauguração da CIFIAL, SA, que resulta da integração da unidade de torneiras de marca CIFIAL com as marcas Oliva e Lusepi.

É adquirida a totalidade do capital da Aquatis e mais tarde nomeada CIFIAL - Indústria Cerâmica, SA.

O Design dos seus produtos é reconhecido internacionalmente, e a marca é galardoada diversas vezes. Para além de vários prémios de Design de Produto, a empresa foi vencedora do DME Award pela utilização do Design como ferramenta estratégica de gestão.

2012 - No final da primeira década do novo milénio a economia mundial é assolada por uma profunda crise, que surge nos Estados Unidos. Desde a década de 80 do século anterior que de uma forma crescente a CIFIAL assenta parte importante do seu negócio no mercado Americano. A crise que assolou este mercado teve impacto imediato e profundo na empresa.

Com o objetivo de manter a empresa em funcionamento, em 2012 é efetuado um processo de reestruturação financeira e o FR - Fundo Capital de Risco, SA adquire uma posição de 90% do capital da CIFIAL S.G.P.S., S.A..

2014 - A CIFIAL celebra 110 anos de existência.

2019 - Após mais de uma década de grande resiliência, a empresa CIFIAL é adquirida, na totalidade, por uma multinacional, a KINLONG.

CIFIAL

00's - This decade has witnessed a wholesale restructuring of the business, accompanied by a change in its corporate image to identify each area of activity - Complete Bath Solutions and Integrated Door Systems.

This led to the birth of CIFIAL, SA, which was the result of the integration of Cifial's tap unit with the Oliva and Lusepi brands.

The company also acquired all the share capital of Aquatis, which it renamed Cifial - Indústria Cerâmica, SA.

Its product designs are recognised internationally, with the brand winning several awards. In addition to its many product design awards, the company won the DME Award for the use of design as a strategic management tool.

2012 - At the end of the first decade of the new millennium the world economy is devastated by a deep crisis, emerged in the United States, considered the worst economic crisis since the Great Depression. Since the 80's of the previous century, CIFIAL has increasingly based an important part of its business in the American market. The crisis that hit this market had an immediate and profound impact on the company

To keep the company afloat it underwent a financial restructuring process in 2012, resulting in FR - Fundo Capital de Risco, SA, acquiring a 90% stake in CIFIAL S.G.P.S., S.A.

2014 - Cifial celebrated its 110 year anniversary.

2019 - After more than a decade of great resilience, Cifial was taken over by the KINLONG multinational company.

História

History

2020 - Impulsionada por uma nova liderança, a Cifial renova o seu showroom e reestrutura as suas equipas por forma a preparar a marca para os grandes desafios que se aproximam.

A pandemia mundial não é travão suficiente para a Cifial, e no ano 2021 são lançadas novas linhas de torneiras e louças sanitárias. Ainda no ano de 2021 as louças sanitárias das conhecidas linhas CIFIAL, A1 e Block, são atualizadas para formato rimless.

Em simultâneo, a Cifial assume preocupação com o ambiente, desenvolvendo melhorias ao nível do consumo hídrico em ambos os negócios.

A imagem corporativa acompanha o novo rumo da marca e surge mais simples, dando destaque ao traço dos artistas, dos artesões, à história, mas mais importante, à experiência.

A legacy in the art of know-how, since 1904.

2020 - Encouraged by its new leadership, Cifial has renovated its showrooms and restructured its teams to prepare the brand for the huge challenges that lie ahead.

The global pandemic is not enough to stop Cifial, and in 2021 new tap and sanitaryware ranges were launched. Still in 2021 CIFIAL renews its well-recognised sanitaryware collections, A1 and Block, with rimless format.

At the same time, Cifial demonstrated its concern for the environment by developing improvements in water consumption at both businesses.

The corporate image follows the brand's new direction. It is simpler and features the artists, craftsmen, history and, most importantly, the experience behind the company.

A legacy in the art of know-how, since 1904.

Identidade

Identity

Fundada em 1904, a CIFIAL acumula mais de um século de conhecimento e experiência industrial.

Um investimento permanente em engenharia de produto e de processos, aliado à utilização do design como ferramenta estratégica confirmam o reconhecimento galardoado com vários prêmios internacionais.

A permanente preocupação em antecipar as tendências do mercado reflete a base do potencial exportador para países com elevados níveis de exigência.

Tudo o que somos vem de uma constante motivação em inovar, desde a conceção e produção do produto, tecnologias incorporadas, design atrativo e funcional à sustentabilidade de todos os processos envolvidos até ao produto final.

Founded in 1904, Cifial has more than a century of industrial knowledge and experience.

A permanent investment in product and process engineering, together with the use of design as a strategic tool, justify the recognition received through winning a number of international awards.

The constant concern with anticipating market trends reflects our potential to export countries with demanding standards.

Everything we are comes from our unending desire to innovate, from product design and production, through incorporated technologies, attractive and functional design, to the sustainability of all the processes involved right up to the final product.

Visão

Tornar a casa de banho um espaço gerador de boas sensações e inspirador para o início de cada dia.

Missão

Oferecer soluções de banho com a melhor proposta de valor nos diversos segmentos de mercado.

Valores

Sustentabilidade, Honestidade, Integridade, Respeito.

Vision

Making bathrooms a welcoming and inspiring space to start each day.

Mission

Offering the best value bathroom solutions in the various market segments.

Values

Sustainability, Honesty, Integrity, Respect.

Qualidade

Quality

Cifial

Na Cifial acreditamos que o sucesso da empresa e o seu crescimento nacional e internacional reside na filosofia de uma melhoria contínua e um compromisso de garantir a total satisfação do cliente.

Num mercado cada vez mais competitivo, destacamo-nos com a arte do saber fazer, um legado de conhecimento visível através da qualidade dos nossos produtos.

Com os mais altos padrões de qualidade e níveis de exigência a Cifial tem implementado um Sistema de Gestão da Qualidade de acordo com os requisitos da NP EN ISO 9001, desde 1993, que privilegia a satisfação das expetativas do cliente.

Os produtos Cifial cumprem todos os requisitos de exigência para os seus mercados de atuação, bem como as normativas internacionais relativas às distintas áreas de negócio.

Cifial

At Cifial, we believe the success of the company and its national and international growth lies in its philosophy of continuous improvement and commitment to ensuring complete customer satisfaction.

In an increasingly competitive market, we stand out thanks to the art of know-how, a legacy of knowledge that can be seen in the quality of our products.

Using the highest and most demanding quality standards, Cifial has implemented a Quality Management System in accordance with the requirements of NP EN ISO 9001, since 1993, which focuses on meeting customer expectations.

Cifial products meet every demanding requirement of their markets, as well as the international standards relating to the different business areas.

Controlo do Processo e de Produto

A capacidade e desempenho do produto são avaliadas durante a produção e comparadas com as obtidas nos ensaios de aprovação do processo.

O Grupo Cifial dispõe de laboratórios na indústria cerâmica e na indústria metalomecânica.

A Cifial adotou uma estratégia de melhoria contínua minimizando os impactos ambientais e assegurando a utilização sustentável dos recursos disponíveis.

Product and Process Control

Process capacity and performance are evaluated during production and compared with the results achieved in the process approval tests.

The Cifial Group has laboratories in the sanitaryware and metal-mechanics.

Cifial has adopted a strategy of continuous improvement minimizing environmental impacts and ensuring the sustainable use of available resources.

Cifial has adopted a strategy of continuous improvement, minimizing environmental impacts and ensuring the sustainable use of available resources.

Metalomecânica

Na indústria metalomecânica, a Cifial está equipada com laboratórios físico-químicos, de espectrometria e de ensaios mecânicos.

São realizados sistematicamente ensaios no lançamento de produtos novos e de acompanhamento ao processo de fabrico. A Cifial garante o cumprimento dos referenciais normativos europeus e americanos, dando resposta às necessidades mais exigentes dos clientes através de realização de ensaios normalizados:

Ensaios de corrosão;

Resistência química;

Ensaios de adesão;

Ensaios de abrasão;

Espessura de revestimento;

Ensaios de produto: hidráulicos de estanqueidade, resistência à fadiga, etc.

Metal-Mechanics

In the metal-mechanics industry, Cifial has Physical-Chemical, Mechanical Tests and Spectrometry laboratories.

Tests are conducted during new products launch and for monitoring of the manufacturing process.

Cifial guarantees compliance with European and American standards, responding to the most demanding customer needs by carrying out standardised tests:

Corrosion testing;

Chemical resistance;

Adhesion testing;

Abrasion testing;

Coating thickness;

Product tests: watertightness hydraulics, fatigue resistance, etc.

Cerâmica

Na Indústria Cerâmica, a Cifial está equipada com os laboratórios de Cerâmica e de Produto, nos quais são permanentemente elaborados ensaios que garantem a qualidade e o cumprimento das normas:

Resistência ao fendilhamento – autoclave;

Resistência mecânica – flexão;

Determinação da absorção de água;

Resistência aos ácidos, agentes químicos e alcalis;

Resistência às manchas;

Determinação dimensional da louça sanitária;

Carga estática a louça sanitária;

Ensaios funcionais a louça sanitária;

Ensaios dinâmicos de desempenho.

Sanitaryware

In the sanitaryware industry, CIFIAL is equipped with Ceramics and Product laboratories, where tests are constantly carried out to guarantee quality and compliance with standards:

Resistance to cracking – autoclave;

Mechanical resistance – bending;

Determination of water absorption;

Resistance to acids, chemical agents and alkalis;

Resistance to stains;

Dimensional determination of sanitaryware;

Static charge on sanitaryware;

Functional testing of sanitaryware;

Dynamic performance testing.

Saber fazer

Know-how

Um legado em saber fazer

A história da CIFIAL traduz-se num legado de conhecimento aliado à arte do saber fazer, o que nos permite oferecer produtos únicos e exclusivos aos nossos clientes.

A personalização transforma objetos de utilização quotidiana em peças icónicas, exclusivas, autênticas obras de arte.

Os nossos artesãos e as nossas equipas de engenharia de produto conjugam o artesanato e as novas tecnologias, aplicando o conhecimento herdado de gerações passadas.

O resultado é a materialização da criatividade dos nossos clientes, com histórias para serem contadas.

A legacy of know-how

Cifial's history translates into a legacy of knowledge combined with the art of know-how, which allows us to offer our customers unique and exclusive products.

Personalisation transforms everyday objects into iconic, exclusive pieces, genuine works of art.

Our craftsmen and product engineering teams combine craftsmanship and new technologies, applying knowledge inherited from past generations.

The result is the materialisation of our customers' creativity, with stories to be told.

Taps

Produção

Production

Matérias-primas e produção de forma.

O latão, a principal matéria-prima das torneiras, é uma liga metálica, constituída essencialmente por cobre e zinco, usada em inúmeras aplicações desde o sec. III AC. Altamente reciclável, por permitir reintegrar os coprodutos gerados no processo de fundição ou em nova matéria-prima, é possível transformá-lo usando várias tecnologias. Este material permite uma boa reprodução de formas, um bom acabamento e garante uma elevada resistência à corrosão. Os processos de fundição de baixa pressão, forjagem e estampagem permitem obter a primeira aproximação à geometria pretendida, garantindo um uso de matéria-prima eficiente. As geometrias obtidas por estes processos serão refinadas em processos posteriores.

Raw Materials and Forming Production Processes.

Brass is the main raw material for taps. It is a metal alloy, composed essentially of copper and zinc and it has been used for many applications since the 3rd century BC. It is highly recyclable, as it is possible to reintegrate the byproducts generated during the casting process into a new raw material. It can be transformed using various technologies. This material allows for a good reproduction of forms, a good finish and it guarantees a high resistance to corrosion. The low-pressure casting process, as well as the forging and stamping processes allow us to obtain the first approximation to the desired geometry, thus ensuring an efficient use of raw material. The geometry obtained through these processes is refined in subsequent processes.

Mecanização e brasagem.

Os detalhes, a precisão dimensional necessária na interface com outros componentes e a rugosidade adequada à obtenção de ligações estanques são garantidos pelos processos de mecanização, com recurso a equipamentos de controlo numérico computadorizado, tais como fresadoras e tornos. A complexidade de algumas peças exige que sejam obtidas a partir de várias peças, menos complexas, unidas pelo processo de brasagem. Neste processo, semelhante a uma soldadura, é usada uma liga metálica, com temperatura de fusão inferior à temperatura de fusão do latão, para unir as peças, resultando em ligações estanques com boa resistência mecânica. Associados a estes processos de mecanização existem processos de controlo das características e funções resultantes.

Mechanisation and Brazing.

The mechanisation process guarantees the detail, the dimensional accuracy in the interface with other components, as well as the adequate roughness for leak-proof connections. This is achieved with computer equipment with numerical control, such as milling machines and lathes. Due to their complexity, some parts are obtained from several less complex parts and joined through the brazing process. This process, which is similar to welding, uses a metal alloy with a lower melting temperature than brass to join the parts, resulting in leak-proof connections with good mechanical strength. Associated with these mechanisation processes there are processes to control the resulting characteristics and features.

Produção

Production

Acabamento.

Além da função estética, os acabamentos garantem proteção às superfícies, aumentando a sua resistência à corrosão e à abrasão. Estes resultam de duas fases: na fase de preparação das superfícies, é definida a textura através de processos de lixagem, polimento, escovagem e texturização química; na fase de revestimento, é definida a cor, o brilho, a dureza e a resistência à corrosão do acabamento. Os acabamentos oxidados, são os que conferem menor proteção e o seu aspeto altera-se com a utilização dos produtos. Seguem-se os acabamentos pintados, que conferem proteção contra a corrosão. Os revestimentos galvânicos, garantem uma elevada protecção contra a corrosão e abrasão. O processo Physical Vapor Deposition (PVD), além de permitir modelar a cor do acabamento, confere à superfície excelente resistência à abrasão e corrosão. Todas as peças acabadas são inspecionadas, garantido a sua conformidade com os mais elevados padrões de qualidade.

Finishing.

Besides aesthetics, finishing processes ensure surfaces are protected and increase their resistance to corrosion and abrasion. These processes are composed of two stages: surface preparation defines the texture through sanding, polishing, brushing and chemical texturing. On the other hand, the coating stage defines colour, shine, hardness, and corrosion resistance of the finishing. Oxidized finishes provide less protection and their appearance changes depending on the use of the product. Then there are painted finishes, which provide protection against corrosion. Galvanic coatings ensure high corrosion and abrasion protection. In Physical Vapor Deposition (PVD) it is possible to control the colour of the finishing. Besides, it gives surfaces excellent abrasion and corrosion resistance. All the finished parts are inspected, thus ensuring they meet the highest quality standards.

Montagem e teste.

Uma torneira é constituída por inúmeros componentes. Para minimizar erros no processo de recolha e separação, estes são guardados em armazéns automáticos integrados com o sistema de gestão da produção. Depois de recolhidos, são encaminhados para os postos de montagem, nos quais cada produto é montado e testado por um profissional experiente. Após montagem, uma amostragem de cada lote é submetida a testes laboratoriais, mais extensos, para caracterizar o desempenho das funções do produto. O resultado são produtos de elevada qualidade estética e funcional.

Assembling and Testing

A tap is made up of many components. To minimize mistakes in the collection and separation process, these components are stored in automatic warehouses which are an integral part of the production management system. After being collected, components are sent to assembling stations, where products are assembled and tested by an experienced professional. After assembly, a sampling from each batch is subject to extensive laboratory tests to determine product performance. This results in high quality products regarding aesthetics and performance.

Acabamentos

Finishes

Acabamentos Cromados ou Niquelados: Os revestimentos eletrolíticos são executados na CIFIAL em instalações automáticas modernas, suportadas por estações de tratamento de efluentes e beneficiando de uma experiência de mais de 40 anos.

O processo de eletrodeposição galvânica confere ao substrato uma maior resistência à corrosão, através da deposição de espessuras de níquel e cromo superiores a 7,5 micron e 0,25 micron para os acabamentos cromados, respetivamente.

Previamente à operação de recobrimento é fundamental para a qualidade final do produto efetuar uma correta preparação das superfícies a recobrir. Na CIFIAL, esta preparação é feita através de robots de lixar e máquinas CNC de polir. Sempre que necessário, um toque manual dá a personalização final que caracteriza os produtos CIFIAL.

Acabamentos Orgânicos: lacados e rústicos: Estes revestimentos são sensíveis devido à sua natureza. Os revestimentos lacados apresentam uma camada de laca a pó ou tinta com espessuras superiores a 40 microns. Os revestimentos rústicos, ou vivos, apresentam uma superfície metálica envelhecida que se altera ao longo da vida e de acordo com o uso, adquirindo carácter único.

Superfícies PVD: A CIFIAL foi pioneira no desenvolvimento de uma tecnologia de revestimento que assenta na mais avançada tecnologia de PVD (Deposição de Vapor Físico).

O PVD melhora de forma significativa as características de dureza e resistência à abrasão da superfície. Comparativamente a um processo de revestimento eletrolítico tradicional sem PVD, este revestimento aumenta substancialmente a resistência à corrosão (Corrodkote, Nevoeiro Salino Acético e Cass Test). As excelentes características deste revestimento resultam numa elevada resistência à deterioração pelos agentes químicos domésticos; numa grande resistência à corrosão por agentes atmosféricos e na elevada dureza, que lhe confere uma maior resistência ao desgaste. O PVD é uma tecnologia amiga do ambiente, não gerando qualquer tipo de efluentes.

Este revestimento apresenta uma elevada resistência aos riscos, permitindo manter o seu aspeto inalterado, e desta forma ir ao encontro das mais elevadas expectativas dos consumidores e às aplicações mais exigentes

Chrome or Nickel Coatings: The electrolytic coatings are processed by CIFIAL at its modern automatic facility, supported by effluent treatment plants and benefiting from over 40 years of experience.

The galvanic electroplating process gives the substrate greater resistance to corrosion by plating it with nickel and chromium at thicknesses greater than 7.5 microns and 0.25 microns, respectively, for chrome finishes.

It is essential for the final quality of the product that the surfaces to be coated are correctly prepared before the plating operation. This preparation is performed at CIFIAL by grinding machines and CNC polishing machines. Whenever necessary, manual intervention is undertaken to give the final customisation that characterises CIFIAL products.

Organic coatings: lacquered and rustic: These coatings are sensitive due to their nature. Lacquered coatings have a coat of powdered lacquer or paint with thicknesses greater than 40 microns. Rustic or living coatings have an aged metallic surface that changes over its lifetime and according to use, meaning it acquires a unique nature.

PVD surfaces: CIFIAL has developed a coating technology based on the most advanced PVD (Physical Vapour Deposition) technology, in which CIFIAL was a pioneer.

PVD significantly improves the surface hardness and abrasion resistance characteristics. This coating substantially increases corrosion resistance compared to a traditional electrolytic coating process without PVD (Corrodkote, Acetic Saline Fog and Cass Tests). The excellent characteristics of this coating give it high resistance to deterioration from domestic chemical agents; high resistance to corrosion by atmospheric agents and greater hardness, which makes it more resistant to wear. PVD is an environmentally-friendly technology, not generating any kind of effluent.

This coating is highly resistant to scratches, allowing it to keep its appearance unchanged and thus meet the highest consumer expectations and the most demanding applications.

Evolution.

O ano de 2020 foi um ponto importante de viragem na longa história da CÍFIAL. Todas as equipas se focaram no desenvolvimento de diversas coleções, que viriam a ser lançadas no início de 2021. A que irá marcar a diferença é a coleção Evolution, composta por torneiras e louças.

Após longos meses de investigação, desenvolvimento e testes de qualidade, a CIFIAL apresenta uma coleção altamente inovadora, uma verdadeira evolução em que a metalurgia e a tecnologia se fundem. Os manipuladores das torneiras de lavatório iluminam-se, numa escala de cor com correspondência à temperatura. É através do seu anel de cor que se seleciona e se sabe a temperatura da água. Através de simples toques no manipulador, é possível selecionar e gravar a temperatura da água, o caudal e o tempo de utilização. Também é possível limitar a temperatura máxima de forma a evitar queimaduras acidentais.

No caso da torneira de duche a evolução é mais drástica. O convencional manipulou de ajuste de fluxo e temperatura da água evolui para um comando tátil com aspeto em tudo semelhante a um smartphone. Através de um conjunto de menus táteis, é possível selecionar e gravar diversas opções. É possível escolher e gravar o fluxo e a temperatura da água, mas também selecionar o chuveiro de mão ou de teto e colocar o funcionamento em pausa.

Um sistema de baterias recarregáveis garante a utilização da torneira em caso falha de abastecimento elétrico. Todo o sistema está preparado para garantir a absoluta segurança de utilização.

Ano de lançamento: 2021.

2020 was an important turning point in CIFAL's long history. All the teams focused on creating various collections to be launched in early 2021. The one that will make a difference is the Evolution collection, composed of taps and porcelain.

After long months of research, development and quality testing, CÍFAL presents a highly innovative collection, a true evolution in which metallurgy and technology merge. The washbasin tap handles light up, on a colour scale corresponding to the temperature. The colour ring lets the users select and see the water temperature. With a simple touch on the handle, it is possible to select and record the water temperature, the flow rate and the time of use. The maximum temperature can be limited to avoid accidental scalds.

The evolution of the shower tap is more drastic. The conventional water flow and temperature adjustment handle has evolved into a tactile control that looks and feels like a smartphone. The tactile menus let you select and save various options. You can choose and record the water flow and temperature, but also select hand or head shower and pause operation.

Release year: 2021.

Edwardian.

A coleção Edwardian deu origem à produção de torneiras na CIFIAL na década de 80 do século XX, marcando uma viragem estratégica da empresa e ficando ligada de forma indelével à história da marca CIFIAL.

No fim da década de 70, a CIFIAL foi desafiada pelo seu cliente Broadway Collection para produzir uma linha de torneiras. Para além dos manipulos que conhecemos hoje, à época e fruto da elevada capacidade técnica, foram desenvolvidos manipulos de elevado requinte e incomparável detalhe artesanal: “old dominion” e “english rope”.

Na década de 80, Nancy Reagan escolhe torneiras da linha Edwardian, produzidas pela CIFIAL, da marca Broadway Collection, para a renovação das casas de banho da Casa Branca.

No início da sua produção, e até surgirem componentes standard para torneiras, a CIFIAL produzia todos os componentes necessários à sua montagem.

Com o decorrer dos anos surge a marca CIFIAL para as torneiras e o modelo Edwardian passa a ser integrado na marca própria. Ao longo do tempo são incorporadas melhorias tecnológicas de forma a cumprir requisitos do mercado nacional e internacional.

Hoje, passados 50 anos desde o seu nascimento, a linha Edwardian é um modelo reconhecido por designers e arquitetos como intemporal e uma referência no mercado, quer pelo design, quer pela qualidade. É até hoje uma peça atual, marcante e relevante no mercado.

Década de desenvolvimento: 1970

The Edwardian collection gave birth to CIFIAL's tap production in the 1980s, marking a strategic turning point for the company and becoming indelibly linked to the history of the CIFIAL brand.

In the late 1970s, CIFIAL was asked by its client Broadway Collection to produce a range of taps. In addition to the handles we know today, at the time, thanks to advanced technical ability, we developed highly refined and incomparably detailed hand-crafted handles: Old Dominion and English Rope.

In the 1980s Nancy Reagan chose taps from CIFIAL's Edwardian range in the Broadway Collection for the renovated White House bathrooms.

At the beginning of production, until the emergence of standard components for taps, CIFIAL produced all the components necessary for their assembly.

Over the years, the CIFIAL brand appeared for taps, and the Edwardian model became part of its own brand. Over time, technological improvements were incorporated to meet the requirements of the national and international markets.

Today, 50 years after its birth, the Edwardian range is recognised by designers and architects as timeless and as a market benchmark due to its design and its quality. To date it has remained an important, striking, modern item on the market.

Hexa.

A coleção Hexa, da autoria do designer Carlos Aguiar, reforça a ligação entre o moderno e o clássico com uma forma hexagonal que se traduz numa atitude de revivalismo das linhas clássicas, distinguindo-se pela elegância e jogo dos reflexos produzido pelo traço das arestas. A Hexa desenvolveu-se em torno de duas ideias chave: uma bica de secção hexagonal e um sistema de manipuladores com diversas configurações alternativas; os manipuladores nasceram de um formato tradicional com desenhos integrados e estampadas com soluções metálicas de secção hexagonal e a utilização cilíndricos em resina, “corian” ou pedra. Atualmente os manipuladores apenas incorporam o latão.

Curiosidade: a água adquire o formato hexagonal ao sair da bica da torneira.

Ano de lançamento: 2006

The Hexa collection by designer Carlos Aguiar reinforces the connection between modern and classic with a hexagonal shape that translates into a revival of classic lines, distinguished by the elegance and play of reflections produced by the line of the edges. Hexa was developed around two key ideas: a hexagonal section spout and a system of handles with several alternative configurations. The handles were born from a traditional format with integrated designs and stamped with metal solutions of hexagonal section and the use of cylindrical resin, “corian” or stone. Currently the handles only incorporate brass.

Interesting fact: the water takes on a hexagonal shape when it comes out of the spout.

L-Spout.

A coleção L-Spout, desenhada por Carlos Aguiar, caracteriza-se pela forma elegante e graciosamente afunilada, sem marcas finais.

A sua forma teve como inspiração a ave pelicano, mais concretamente o seu longo bico e grande bolsa na garganta. Os manípulos em formato de alavanca tornam a sua utilização fácil, particularmente para utilizadores com limitação de movimentos.

Em 2007, o modelo de lavatório ganhou o prémio norte-americano de excelência de design ADEX Prata.

Ano de lançamento: 2006

The L-Spout collection, designed by Carlos Aguiar, is characterised by its elegant and gracefully tapered shape with no end marks.

Its shape was inspired by the pelican's long beak and large throat pouch. The lever-shaped handles make it easy to use, particularly for users with limited movement.

In 2007, our washbasin model won the American ADEX Silver Design Excellence Award.

M3.

O conceito da coleção M3 surgiu da ideia minimalista de um retângulo com os lados mais pequenos em formato semicircular. Foi a primeira coleção de torneiras capaz de dar resposta às exigências dos mercados europeu e americano. Para tal, utiliza dois sistemas principais de controlo de água: os tradicionais castelos de discos cerâmicos, e os cartuchos de monocomando. Esta linha apresenta um joystick, na versão monocomando. Esta característica torna esta torneira única.

Esta inovação ganhou um lugar de finalista no GOOD DESIGN 2007 na Polónia, pela torneira monocomando de lavatório com joystick de bica alta. Em 2008, o sistema de duche e a misturadora de lavatório de três furos ganham os prémios norte-americanos de excelência de design , ADEX Ouro e ADEX Platina, respetivamente.

Ano de lançamento: 2006

The concept of the M3 collection came from the minimalist idea of a rectangle with smaller sides in a semicircular shape. It was the first tap collection capable of meeting the demands of the European and American markets. To do this, it uses two main water control systems: traditional ceramic disc spindles and single-lever cartridges. This line features a joystick in the single-lever version. This feature makes this tap unique.

This innovation was a finalist at GOOD DESIGN 2007 in Poland for its single-lever basin mixer with high-spout joystick. In 2008, the shower system and the three-hole basin mixer won the American awards for design excellence, ADEX Gold and ADEX Platinum, respectively.

TX300.

A TX300 surgiu da coleção Techno 300+, desenhada pelo designer Carlos Aguiar. É uma coleção inspirada na tradição “Deco” com ligações às tendências modernas de arquitetura. As torneiras de banho podem ser complementadas com suporte em madeira, característica presente também na coleção Techno 465. Inicialmente, este suporte foi lançado em ABS (exclusivo da CIFIAL).

Ano de lançamento: 2016.

The TX300 emerged from the Techno 300+ collection created by designer Carlos Aguiar. It is a collection inspired by the Deco tradition with links to modern architectural trends. The bathroom taps can be complemented with a wooden base, a feature that is also present in the Techno 465 collection. Initially, this base was launched in ABS (exclusive to CIFIAL).

Release year: 2006

Techno 465.

A coleção Techno 465, idealizada pelo designer Carlos Aguiar, tornou-se, até à data, no projeto de design industrial português mais premiado. É um marco fundamental da gama de torneiras CIFIAL.

O processo de desenvolvimento de produto foi desafiante devido ao corpo cilíndrico, de linhas bem definidas. A sua forma foi tão inovadora, em particular nos modelos expostos de duche e banho/duche, que originou a necessidade de registo de patente relativa à arquitetura da torneira e dos dispositivos de apoio em ABS colorido que se alojam sobre a mesma.

Atualmente, seguindo uma vertente mais ecológica, todos os dispositivos de apoio são em madeira.

A coleção Techno 465 foi galardoada com o DESIGN PLUS e RED DOT na Alemanha, e GOOD DESIGN nos EUA.

Ano de lançamento: 1998.

The Techno 465 collection, created by designer Carlos Aguiar, is the most awarded Portuguese industrial design project to date. It is a cornerstone of the CIFIAL tap range.

The product development process was challenging due to the cylindrical body with well-defined lines. Its shape was so innovative, particularly in the shower and bath/shower models displayed, that it led to the need to register a patent for the architecture of the tap and the coloured ABS support devices fitted over it.

Currently, in a more environmentally-friendly approach, all support devices are made of wood.

The Techno 465 collection was awarded the DESIGN PLUS and RED DOT in Germany, and GOOD DESIGN in the USA.

Release year: 1998.

Style H 20D.

Durante o final de 2019 e todo o ano de 2020 as equipas da CIFIAL investigaram, desenvolveram e testaram diversas coleções de torneiras. Ao todo foram cinco as coleções de torneiras lançadas em 2021.

A coleção Style H 20D, desenhada com manipulo plano, de aspecto angular com cantos redondos, caracteriza-se pelo seu design minimalista e funcional, adaptável às decorações modernas.

O design desta coleção tem paralelo na coleção R2 de louça sanitária.

As coleções Style 20 têm em comum o facto de se complementarem, permitindo dar resposta a designs diferentes, num estilo moderno e simples. Todas estão equipadas com sistema de redução de caudal que emulsiona ar na água. Este sistema transmite a sensação de elevado fluxo de água, mas com baixo consumo hídrico.

Ano de lançamento: 2021.

In late 2019 and all of 2020 CIFIAL teams researched, developed and tested several tap collections. In total, five tap collections will be launched in 2021.

The Style H 20D collection, designed with a flat handle, angular in appearance with rounded corners, is characterised by its minimalist and functional design, adaptable to modern decors.

The design of this collection has parallels in the R2 sanitary ware collection.

The Style 20 collections complement each other, allowing different designs to be created in a modern and simple style. They all have a flow reduction system that injects air into the water using an aerator. This system gives the feeling of high water flow but with low water consumption.

Release year: 2021.

Techno 251.

A Techno 251 nasceu de uma atualização da coleção Techno 250 (lançada em 2008), desenvolvida a partir de investigação conjunta entre a CIFIAL e o INEGI. Foi finalista do prestigiado prémio de design no Japão, Good Design GMark, e ganhou o prémio de Produto do Ano da revista Lazienka na Polónia.

A Techno 251 caracteriza-se pela elegância no detalhe, em especial nos contornos do comando “gota”, e na forma como o emulsor está embutido na bica.

Ano de lançamento: 2011.

Techno 251 was born from an update of the Techno 250 collection (launched in 2008), developed from joint research between CIFIAL and INEGI. It was a finalist for the prestigious design award in Japan, Good Design GMark, and won the Product of the Year award from Lazienka magazine in Poland.

Techno 251 is characterised by elegance in detail, especially in the contours of the “drop” control, and in the way the emulsifier is built into the spout.

Release year: 2011.

Style H 20C.

Durante o final de 2019 e todo o ano de 2020 as equipas da CIFIAL investigaram, desenvolveram e testaram diversas coleções de torneiras. Ao todo foram cinco as coleções de torneiras lançadas em 2021.

A coleção Style H 20C surgiu durante o processo de pesquisa e desenvolvimento. A linha Style H 20 não poderia apenas ter um modelo angular. Existem decorações que exigem formas curvas. Para dar resposta a esta necessidade surge o manipulô plano, de frente redonda, apoiado num corpo cilíndrico com a mesma volumetria da coleção Style H 20D.

O design desta coleção tem paralelo na coleção A2 de louça sanitária.

As coleções Style 20 têm em comum o facto de se complementarem, permitindo dar resposta a designs diferentes, num estilo moderno e simples. Todas estão equipadas com sistema de redução de caudal que emulsiona ar na água. Este sistema transmite a sensação de elevado fluxo de água, mas com baixo consumo hídrico.

Ano de lançamento: 2021.

five tap collections will be launched in 2021.

The Style H 20C collection emerged during the research and development process. The Style H 20 line could not only have an angular model. There are decorations that require curved shapes. This need was met by the flat handle, with a round front, supported by a cylindrical body with the same volume as the Style H 20D collection.

The design of this collection has parallels in the A2 sanitary ware collection.

The Style 20 collections complement each other, allowing different designs to be created in a modern and simple style. They all have a flow reduction system that injects air into the water using an aerator. This system gives the feeling of high water flow but with low water consumption.

Release year: 2021.

Style 35.

A série Style 35, desenhada por Carlos Aguiar, surgiu do desafio de criação de um modelo equipado com cartucho cerâmico de 35 mm de diâmetro, mais equilibrado em termos de performance e dimensão.

Esta coleção lançou alicerces para o conceito “Style”, na oferta da CÍFIAL.

Ano de lançamento: 2003.

The Style 35 series, designed by Carlos Aguiar, arose from the challenge of creating a model equipped with a 35 mm diameter ceramic cartridge that was more balanced in terms of performance and size.

This collection laid the foundations for the “Style” concept in CÍFIAL's offer.

Release year: 2003.

Style L 20B.

Durante o final de 2019 e todo o ano de 2020 as equipas da CIFIAL investigaram, desenvolveram e testaram diversas coleções de torneiras. Ao todo foram cinco as coleções de torneiras lançadas em 2021.

A coleção Style L 20B surge da necessidade de complementar a coleção Techno 465, para que os clientes que preferem um manipulo singelo, mas não cilíndrico, possam ter uma solução na marca CIFIAL.

Esta coleção está equipada com sistema de redução de caudal que emulsiona ar na água. Este sistema transmite a sensação de elevado fluxo de água, mas com baixo consumo hídrico.

Ano de lançamento: 2021.

In late 2019 and all of 2020 CIFIAL teams researched, developed and tested several tap collections. In total, five tap collections will be launched in 2021.

The Style L 20B collection arises from the need to complement the Techno 465 collection, so that customers who prefer a simple but not cylindrical handle can have a CIFIAL solution.

This collection has a flow reduction system that injects air into the water using an aerator. This system gives the feeling of high water flow but with low water consumption.

Style 25.

O formato cilíndrico, simples, com um manipulô igualmente cilíndrico e fino, tornou-se icônico e largamente disseminado no sector. Este modelo é frequentemente solicitado nos mais variados acabamentos, desde os clássicos aos contemporâneos.

Pela sua simplicidade e elegância é reconhecida no mercado, contudo poucos saberão a origem deste modelo.

O modelo de lavatório é “watersense” permitindo uma poupança de água de 30%.

Em 2009, a Style 25 foi distinguida com o prêmio ADEX Ouro na competição ADEX (Awards for Design Excellence).

Ano de lançamento: 2007.

The simple, cylindrical shape with an equally cylindrical, slim handle has become iconic and widespread in the industry. This model is often requested in a variety of finishes, from classic to contemporary.

It is recognised in the market for its simplicity and elegance, though few people know the origin of this model.

The washbasin model meets WaterSense criteria, allowing a 30% water saving.

In 2009, Style 25 was awarded the ADEX Gold Award at the ADEX (Awards for Design Excellence) competition.

Release year: 2007.

Produção

Production

Conformação.

Os artigos sanitários são conformados por enchimento, onde a barbotina cerâmica (suspensão aquosa) enche um molde de gesso. Após um período determinado de tempo, com a absorção de água pelo gesso, a peça é desmoldada. A barbotina é vertida, ou bombada, para os moldes e o ciclo de enchimento é controlado automaticamente pelo equipamento. As peças são desmoldadas manualmente com o auxílio de aparelhos próprios para o efeito. As superfícies exteriores das peças de sanitário são cobertas com vidrado cerâmico. Podem, também, ser cobertas áreas críticas interiores – por exemplo o sifão de sanitas e o aro interno das sanitas rimless.

Conformation.

The sanitaryware is formed by filling, in which ceramic slip (water suspension) fills a plaster mould. After a certain period of time, with the water absorbed by the plaster, the piece is removed from the mould. The slip is poured, or pumped, into the moulds and the filling cycle is automatically controlled by the equipment. The pieces are removed from the mould manually with the help of appropriate equipment. The outer surfaces of the sanitaryware are covered with ceramic glaze. Critical interior areas can also be covered - for example the toilet siphon and the inner ring of rimless toilets.

Cozedura.

A cozedura é o processo de transformação do produto cerâmico pela aplicação de calor.

Durante este processo podemos observar as seguintes alterações: Alteração no volume (contração); Alteração estética da superfície; Fusão de alguns dos componentes, transformando-os em vidro; Cristalização, com a formação de novas fases; Diminuição da permeabilidade (porosidade); Aumento da resistência mecânica.

Durante o aquecimento, a temperatura aumenta desde a temperatura ambiente até cerca de 1200°C. O ciclo total depende de requisitos do produto, variando habitualmente entre 16 e 24 horas.

Firing.

Firing is the process of transforming the ceramic product by applying heat.

During this process we can observe the following changes: Change in volume (contraction); Aesthetic alteration of the surface; Fusion of some of the components, transforming them into glass; Crystallisation, with the formation of new phases; Decreased permeability (porosity); Increased mechanical resistance.

During firing, the heat increases from room temperature to around 1,200 °C. The total cycle depends on product requirements, usually from 16 to 24 hours.

Produção

Production

Escolha.

As peças cozidas são inspecionadas a 100%, e classificadas de acordo com critérios previamente definidos.

A Cifial possui apenas uma classe: 1ª escolha.

Sorting

The fired pieces are fully inspected and classified according to previously defined criteria.

Cifial has only one class: 1st choice.

Processos adicionais.

A Cifial dispõe de processos finais que lhe permitem colocar no mercado produtos de elevada qualidade: Retificação, Corte e Gravação laser. Para conforto dos clientes, os mecanismos de descarga são previamente instalados.

Additional Processes

Cifial has final processes that allow it to place high-quality products on the market: Grinding, Cutting and Laser engraving. For the comfort of customers, the flushing mechanisms are pre-installed.

Evolution R.

O ano de 2020 foi um ponto importante de viragem na longa história da CIFIAL. Todas as equipas se focaram no desenvolvimento de diversas coleções, que viriam a ser lançadas no início de 2021.

A que irá marcar a diferença é a coleção Evolution, composta por torneiras e louças.

Após longos meses de investigação, desenvolvimento e testes de qualidade, a CIFIAL apresenta uma coleção altamente inovadora, uma verdadeira evolução em que a cerâmica e a tecnologia se misturam.

A sanita Evolution R é uma sanita inteligente com inúmeras funções. Habitualmente conhecidas no mercado como SMART ou Sanitas Bidé, a Sanita Evolution R está equipada com um conjunto de características extraordinárias que irão surpreender. Este modelo vai muito mais longe do que apenas oferecer ar quente, água quente ou assento aquecido. A saúde do utilizador também foi tida em conta.

O conforto, a higiene e a saúde do utilizador foram os focos principais do desenvolvimento, mas a louça também teve uma especial atenção durante o processo de desenvolvimento. A Sanita Bidé Evolution R está equipada com limpeza automática e descalcificação.

Ano de lançamento: 2021.

2020 was an important turning point in CIFIAL's long history. All the teams focused on creating various collections to be launched in early 2021.

The one that will make a difference is the Evolution collection, composed of taps and porcelain.

After long months of research, development and quality testing, CIFIAL presents a highly innovative collection, a true evolution blending porcelain and technology.

The Evolution R toilet is a smart toilet with numerous functions. Usually known on the market as SMART or Bidet WC, the Evolution R WC is equipped with a set of extraordinary features that will surprise you. This model goes much further than just offering hot air, hot water or a heated seat. The user's health has also been taken into account.

The comfort, hygiene and health of the user were the main focuses of its development, but the porcelain also received special attention during the development process. The Evolution R bidet toilet is equipped with automatic cleaning and descaling.

Release year: 2021.

32 FUNÇÕES DESIGN SIMPLES E ELEGANTE.

Tampo com formato gota de água, com 12mm de espessura.
Clip off e abertura a 90°
Vara de libertação de água em forma de arco, mais curta.
Tampo soft close.
Tecnologia de aquecimento instantâneo de água.
Comando com Formato em prisma triangular, com encaixe perfeito e fá cil no suporte de parede.
Funcionamento intuitivo e fácil programação.
Iluminação noturna, com LED.

HIGIENE

Desodorizante de fácil substituição.
Descalcificação.
Pulverizador destacável para limpeza eficiente
Pré-humidificação para melhor autolimpeza
Estrutura Rimless, para limpeza profunda com menor consumo hídrico.

PERSONALIZAÇÃO

Controlo remoto com múltiplas funções
Botões laterais de fácil acesso.
Volume de água
Temperatura da água
Pressão da água
Lavagem e secagem íntima para ambos os géneros

SEGURANÇA

Proteção de sobreaquecimento de água.
Proteção de sobreaquecimento de ar.
Proteção elétrica.
Antibacteriano.
Dispositivo anti gelo.
Funcionamento assegurado em caso de ausência de corrente elétrica.

32 FUNCTIONS CLEAN AND ELEGANT DESIGN.

Seat with water drop design, and 12mm thickness.
Clip off, 90° opening.
Shorter arc shape water wand.
Soft close seat cover.
Constant warm washing water.
Remote with ergonomic design for maximum user confort.
Wedge-shaped with perfect and easy fitting in the wall bracket.
User-friendly software and easy programming.
LED Night Light.

HYGIENE

Deodorizer with easy replacement.
Descaling function.
Detachable sprayer for a more efficient cleaning.
Pre-wetting and self-cleaning sprayer.
Rimless structure.

CUSTOMIZABLE

Multifunctional remote.
Rotary side knob control.
Water volume.
Water temperature.
Water pressure.
Intimate washing and drying for both genders.

PROTECTION

Over heated water protection.
Warm air drying protection.
Electrical protection.
Antibacterial.
Anti icer device.
Guaranteed to function in the event of a power failure.

Lavagem

Personalização de temperatura, pressão para as diferentes opções.

Water

Customized adjustment of temperature, pressure and water volume, for the different washing options.

Autolimpeza

Autolimpeza do bocal de saída da água e da louça sanitária.

Self-cleaning Sprayer

The self cleaning sprayer ensures a clean and fresh wash.

Secagem

Ajuste personalizado de temperatura e volume de ar.

Drying

Customised adjustment of temperature and air volume.

Bocal de saída de água

Destacável para fácil limpeza ou substituição.

Water outlet nozzle

Detachable for easy cleaning or replacement.

Funções de acordo com o género

Lavagem e secagem íntima para ambos os géneros.

Functions by gender

Intimate washing and drying for both genders.

Desodorização inteligente

Função de ar fresco e desodorizante são ativadas no momento de utilização da sanita bidé.

Intelligent Deodorization

Fresh air and deodorising function are activated when the smart toilet is being used.

Pré-humidificação

Spray acionado no início da utilização para melhor limpeza posterior da louça sanitária. Limpeza mais fácil e eficaz, com menor consumo hídrico.

Pre-wetting

Spray activated at the beginning of use for better cleaning, afterwards. Easier and more effective cleaning, with less water consumption.

A1.

A série A1 surge da necessidade de louças com formas geométricas versáteis e simples.

O seu formato tornou-se facilmente identificável e largamente replicado.

A funcionalidade de dupla descarga e um consumo de 4,5L por descarga são fruto da preocupação de conservação dos recursos hídricos.

No ano de 2021 a linha é atualizada. O molde de fabrico é alterado e a linha A1 passa a ser rimless, característica que proporciona uma limpeza mais eficaz durante a descarga, facilitando a higienização.

Ano de lançamento: 2014

The A1 series arises from the need for sanitary ware in simple, versatile geometric shapes.

Its format has become easily identifiable and widely replicated.

The dual flush option and consumption of 4.5 l per flush stem from a concern for conservation of water resources.

In the year 2021 the collection is updated. The mold is modified and the A1 collection becomes rimless, a characteristic that provides a more effective cleaning during flushing, aiding hygienization.

R2.

Há já algum tempo que a CIFIAL não tinha na sua oferta de cerâmica uma coleção de linhas quadradas.

A coleção R2 surge na mesma linha de design da coleção de torneiras Style H 20D: linhas angulares e arredondadas, confortáveis, e volumetria generosa, mas elegante.

O nome R2 surge no seguimento da última linha quadrada apresentada pela CIFIAL, denominada R1.

Ano de lançamento: 2021.

It has been some time since CIFIAL had a square line collection in its porcelain offer.

The R2 collection follows the same design line as the Style H 20D tap collection: comfortable, rounded, angular lines and generous but elegant volume.

The name R2 follows on from the last square line presented by CIFIAL, called R1.

Release year: 2021.

A2.

A coleção A2 é desenvolvida para completar a oferta de cerâmica. Tal como acontece nas novas coleções de torneiras, existe a opção de escolha entre linhas quadradas ou redondas. A coleção A2 combina perfeitamente com as torneiras Style H 20D, mas não só. O nome da linha, A2, surge como seguimento natural da A1.

Ano de lançamento: 2021.

The A2 collection is designed to complete the porcelain offer. As with the new tap collections, there is a choice of square or round lines. The A2 collection perfectly matches Style H 20D taps and fittings, among others. The name of the line, A2, appears as a natural follow-up to A1.

Release year: 2021.

Óptima.

Com o objetivo de disponibilizar no mercado peças mais acessíveis sem perder a qualidade pela qual todos os produtos da CIFIAL se regem, nasce a linha Óptima.

Para tal acontecer foi necessário elevar a eficiência produtiva, com o lema de “design acessível e sustentável”.

No ano de 2021 a linha é complementada com um modelo de perfil encostado à parede, BTW – back to wall, tornando a coleção Óptima uma opção para decorações clássicas ou modernas.

Este modelo BTW é de estrutura rimless, característica que proporciona uma limpeza mais eficaz durante a descarga, facilitando a higienização.

Ano de lançamento: 2010

The Óptima line was created to make more affordable pieces available on the market without forfeiting the quality for which all CIFIAL products are renowned.

For this to happen, it was necessary to increase production efficiency, with the motto “affordable, sustainable design”.

In 2021, the collection is added by a model with a profile against the wall, BTW - back to wall, making Óptima an option for both classic and modern decorations.

This BTW model has a rimless structure, a characteristic that provides more effective cleaning during flushing, aiding hygienization

Release year: 2010

Lavatórios.

Entre os vários lavatórios pode-se destacar o lavatório Techno C3, desenhado por Carlos Aguiar, apresentado no mercado como uma coleção apenas experimental.

Devido às suas formas geométricas muito particulares, foi finalista do GOOD DESIGN 2007 na Polónia, e finalista do Red Dot Design Award em 2003 na Alemanha.

As coleções compostas por pedra natural nasceram do trabalho conjunto entre o designer Carlos Aguiar e o departamento de Design e Engenharia de Produto.

Inspiradas na arquitetura japonesa são constituídas por materiais 100% naturais, compostas por pedra de ardósia preta ou mármore preto/ branco, móvel em madeira de cerejeira maciça e o ripado de apoio destacável em madeira de teca proveniente de madeiras sustentáveis de florestas de plantação da Birmânia. A construção dos móveis da coleção Kioto recorre às melhores técnicas artesanais de marcenaria portuguesa, com fixação por pinos de madeira de veio cruzado.

One outstanding piece is the Techno C3 washbasin, designed by Carlos Aguiar, which was placed on the market as an experimental collection only.

Thanks to its unique geometric shapes, it was a GOOD DESIGN 2007 finalist in Poland and a Red Dot Design Award finalist in Germany in 2003.

The collections in natural stone were born from joint work by the designer Carlos Aguiar and the department of Design and Product Engineering.

Inspired by Japanese architecture, they are made of 100% natural materials, composed of black slate stone or black/ white marble, solid cherry wood furniture and a detachable support slat in teak wood sourced from sustainable timber plantation forests in Burma. The construction of the furniture from the Kioto collection uses the best handicraft techniques of Portuguese carpentry, with fixing by wooden pins in cross-section.
